C5.4 Pretensioned Prestressed Concrete Beam

See the Office of Bridges and Structures web site for archived Methods Memos listed under articles in this section.

The Methods Memos for which policies have been partially revised and/or for which document references have been updated are noted as partially revised. Any obsolete Methods Memos that apply to this section are listed at the end.

C5.4.2 PPCB LRFD

C5.4.2.1 General

C5.4.2.1.1 Policy overview

Methods Memo No. 159: Policy on Bulb Tee Use
1 June 2008

Methods Memo No. 77: Changes to new BTC and BTD Beams (Supersedes Methods Memo No. 66 in cases of conflict)
14 January 2003

Methods Memo No. 84: New Beam Standard Development
24 July 2003

Methods Memo No. 73: Use of Special Prestressed Beam Designs
30 December 2004

C5.4.2.1.2 Design information

C5.4.2.1.3 Definitions

C5.4.2.1.4 Abbreviations and notation

Methods Memo No. 77: Changes to new BTC and BTD Beams (Supersedes Methods Memo No. 66 in cases of conflict)
14 January 2003

Methods Memo No. 84: New Beam Standard Development
24 July 2003

C5.4.2.1.5 References

C5.4.2.2 Loads

C5.4.2.2.1 Dead

Methods Memo No. 24: Beam Design and Bearing Design, Distribution of Dead Load 2
4 September 2001 (Under LRFD this memo will apply to DC2 and DW loads.)

C5.4.2.2.2 Live

Methods Memo No. 182: LRFD Live Load Distribution for Skewed Bridges with Non-standard Rolled Steel Beams, Non-standard Prestressed Beams or Welded Plate Girders

1 July 2008

Methods Memo No. 40: Exterior Beam Distribution Factor -- LRFD
28 August 2001

C5.4.2.2.3 Dynamic load allowance

C5.4.2.2.4 Earthquake

C5.4.2.2.5 Construction

C5.4.2.3 Load application to superstructure

C5.4.2.3.1 Load modifier

C5.4.2.3.2 Limit states

Memo 5.4.2.3.2, 5.5.2.3.2, and 5.6.2.3.2-2011 ~ Strength V Limit State During Construction and Other Revisions

Based on the description in the AASHTO LRFD Specifications of the Strength V limit state it seemed that it was not intended to be checked during construction. However, a steel plate girder example by M.A. Grubb and R.E. Schmidt distributed nationally by the U.S. Department of Transportation (USDOT) and National Steel Bridge Alliance (NSBA) includes Strength V during construction. The description of Strength V notes: "…plus 1.35 times the design live load (or any temporary live loads acting on the structure when evaluating the construction condition), plus 0.4 times the wind load on the structure, plus 1.0 times the wind on the live load. For evaluating the construction condition under the STRENGTH V load combination, the load factor for temporary dead loads that act on the structure during construction is not to be taken less than 1.25 and the load factor for any non-integral wearing surface and utility loads may be reduced from 1.5 to 1.25." Based on the example and other sources it is clear that Strength V should be checked during construction when appropriate, and articles in the design manual have been revised with respect to construction limit states. (There are several other changes, also.) The steel example is available at the following URL:

http://www.virginiadot.org/business/resources/SteelDesignExample.pdf

C5.4.2.4 A-D and BTB-BTE beams

C5.4.2.4.1 Analysis and design

C5.4.2.4.1.1 Analysis assumptions

C5.4.2.4.1.2 Materials

Methods Memo No. 80: Maximum Release and Final Concrete Strength for PPCB
15 April 2003

C5.4.2.4.1.3 Design resistance and stress limits

C5.4.2.4.1.4 Section properties

Methods Memo No. 97: Revision of MM No. 83 Camber Calculations Using Transformed Sections for Prestressed Beam Design
21 May 2004

C5.4.2.4.1.5 Deflected strands

C5.4.2.4.1.6 Prestress losses

C5.4.2.4.1.7 Moment

C5.4.2.4.1.8 Shear

C5.4.2.4.1.9 Deflection and camber

C5.4.2.4.1.10 Anchorage zone

C5.4.2.4.1.11 Handling and shipping

C5.4.2.4.1.12 Additional considerations

C5.4.2.4.2 Detailing

Methods Memo No. 99: Update of Bid Item Codes for BTC and BTD
16 July 2004

Methods Memo No. 73: Use of Special Prestressed Beam Designs
30 December 2004

Methods Memo No. 105: Use of Epoxy-Coated Reinforcing Steel
28 March 2005

~~**Methods Memo No. 197: Revision to E/M 202 – Embedded Deck Hangers in PPCB**~~
~~**1 May 2008**~~

Methods Memo No. 56: Sealing of PCBM Ends
22 October 2003

Obsolete: Methods Memo No. 36: Miscellaneous Design and Detailing Issues for 71½ (1800 mm) Bulb Tee
7 January 2002

Obsolete: Methods Memo No. 66: Guidelines for Using Standard Prestressed Concrete Beams
27 August 2002 (Much of this memo was superseded by MM No. 77 on 14 January 2003.)

Obsolete: Methods Memo No. 83: Camber Calculations Using Transformed Sections
11 April 2003 (This memo was superseded by Methods Memo No. 97 on 21 May 2004.)

Obsolete: Methods Memo No. 106: End Beam Dimension for BTC
7 February 2005

Obsolete: Methods Memo No. 147: Embedded Deck Hanger Forms in PPCB
15 May 2007 (This memo was superseded by MM No. 197, 1 May 2008.)

Obsolete: Methods Memo No. 183: Policy Regarding Construction Loading
1 January 2008

Obsolete: Methods Memo No. 197: Revision to E/M 202 – Embedded Deck Hangers in PPCB 1 May 2008
